

# Incident Report

**Incident ID:** inc-dca10fe8

**Job:** reports

**Scenario:** No files found

**Generated:** 2025-11-27 20:41:52

## Executive Summary

A **LOW** severity issue was detected in job **reports**. The root cause is hypothesized to be **No files found**. 1 downstream assets are potentially impacted.

## 2. Root Cause Analysis

Hypothesis: No files found

## 3. Confidence Breakdown

Component	Score
Final Score	0.1 (LOW)
History Score	0.0
Field Drift	0.0
Anomaly Score	0.0

## 4. Evidence

### 4.1 Log Excerpt

```
2025-11-24 11:00:05 ERROR job=reports No files found for partition dt=2025-11-24
```

## 5. Downstream Impact

Asset	Type	Critical
dashboard.reports	dashboard	No

## 6. Recommendations

1. Missing partition detected
2. Verify storage prefix exists and list objects: `aws s3 ls` or `gsutil ls` and confirm objects under .
3. If upstream should have produced this partition: re-run the upstream producer job for the window (job: reports).
4. If backup data exists: run a targeted backfill to restore /.
5. If upstream intentionally skipped: mark the partition as 'no-data-expected' and configure downstream pipelines to soft-skip.
6. Confidence: High — missing partition pattern found in logs.
